<b>Foreword 1</b>	<b>ix</b>
<b>Foreword 2</b>	<b>x</b>
<b>Foreword 3</b>	<b>xi</b>
<b>Author biography</b>	<b>xii</b>
<b>Acknowledgements</b>	<b>xiii</b>
<b>Preface</b>	<b>xiv</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Computation and the structural engineer	1
1.2 The computer as Engineering Assistant	1
1.3 The purpose of design and analysis	1
1.4 Garbage in, Garbage out	3
1.5 The engineer of today and tomorrow	4
1.5.1 To code or not to code	5
1.5.2 The need for better design	6
1.6 The computational engineer	6
<b>2 Design</b>	<b>8</b>
2.1 Introduction	8
2.1.1 Learning to be creative	15
2.1.2 Structural art	15
2.2 The design process	16
2.3 Design personalities	17
<b>3 Design parametrically</b>	<b>18</b>
3.1 Introduction	18
3.2 How we work with computers	18
3.3 Parametrics	19
3.3.1 La Sagrada Família	19
3.3.2 Selfridges Birmingham	20
3.3.3 Camp Adventure tower	22
3.3.4 The Gherkin	23
3.3.5 King's Cross concourse	24
3.3.6 Everyday parametrics	26
3.3.7 Programming and scripting	27
3.4 Design communication	30
3.4.1 BIM, interoperability and digital workflows	31
3.4.2 Standards	35
3.4.3 Beyond 3D CAD: 4D, 5D and 6D	36
3.5 Conclusion	36

<b>4</b>	<b>Analysis basics</b>	<b>37</b>
4.1	Analysis — the key things you need to know	37
4.2	What is a model?	37
4.2.1	Simplification	39
4.2.2	The stool paradox	39
4.3	Software choices	40
4.3.1	Components, section design and detailing	40
4.3.2	Dedicated whole-structure design	40
4.3.3	General structural analysis and design	41
4.3.4	Modelling, documentation and communication	41
4.4	FEA 101	41
4.4.1	What is the purpose of FEA and how does it differ from CAD?	41
4.4.2	Essential aspects of an FEA model	42
4.5	Elements in more detail	43
4.5.1	1D elements	44
4.5.2	Meshed elements	46
4.6	Model types	50
4.6.1	One-dimensional models	50
4.6.2	Two-dimensional models	50
4.6.3	Three-dimensional models	51
4.7	Design the analysis — analyse the design	52
4.7.1	Plan	53
4.7.2	Do	53
4.7.3	Check	53
4.7.4	Act	53
<b>5</b>	<b>Modelling structures</b>	<b>54</b>
5.1	What is a good FEA model?	54
5.1.1	Accurate (as necessary)	54
5.1.2	Realistic (as appropriate)	55
5.1.3	Simple (as possible)	56
5.1.4	Useful (and relevant)	57
5.1.5	Checking	58
5.1.6	Saint-Venant's principle	58
5.2	Applying good modelling	58
5.2.1	Structural types	58
5.2.2	Meshing	59
5.2.3	Trusses	62
5.2.4	Steel frames	63
5.2.5	Concrete	69
5.2.6	Substructure	77
5.2.7	Timber	78
5.2.8	Masonry	78
5.2.9	Modelling for vibration	79

---

<b>6</b>	<b>Analysis methods</b>	<b>83</b>
6.1	Introduction	83
6.2	Static linear analysis and the stiffness matrix	84
6.2.1	Stiffness matrices	85
6.3	P-delta analysis and the geometric stiffness matrix	91
6.4	Buckling analysis and the geometric stiffness matrix	94
6.4.1	Eigenvector analysis	96
6.4.2	Using buckling load analysis	98
6.5	Dynamic analysis and the mass matrix	100
6.5.1	Introduction	100
6.5.2	Modal dynamic analysis	102
6.5.3	Dynamic response analyses	103
6.6	Nonlinear analysis (with and without matrices)	106
6.6.1	Newton-Raphson method	114
6.6.2	Explicit solvers	116
6.6.3	Meshfree and particle methods	121
6.7	Conclusion	122
<b>7</b>	<b>Resolving problems in FEA models</b>	<b>123</b>
7.1	Finite element approximation	125
7.1.1	Ill-conditioning	126
7.1.2	Warnings and errors	128
7.2	Getting the units wrong	128
7.3	Exercising restraint	129
7.3.1	No restraint	129
7.3.2	Too much restraint	129
7.3.3	Confusing 'restraints' with 'releases'	134
7.4	Forgetting torsion	135
7.5	Misusing offsets	136
7.5.1	Bad offsets	136
7.5.2	Good offsets	138
7.6	Meshing too coarsely or too finely	139
7.6.1	Other mesh errors	142
7.7	Second-order effects	143
7.7.1	Linear when it should be nonlinear	143
7.7.2	Buckling effects	146
7.7.3	Meshing	147
7.7.4	Linear vs. nonlinear buckling	149
7.7.5	Design	149
7.8	Validate the model	150
7.8.1	Valid models	150
7.8.2	Software validation	151

7.9	Verify the model	152
7.9.1	Envelope results	154
7.9.2	Software errors	154
7.9.3	Checklist for model-checking	155
7.10	Conclusion	155
7.11	Further reading	156
<b>8</b>	<b>Optimisation</b>	<b>157</b>
8.1	Why optimise?	157
8.2	What is optimisation?	158
8.3	What are we trying to optimise?	160
8.4	Optimisation types	161
8.4.1	The difference between civil and mechanical engineering optimisation	161
8.5	Topology optimisation	162
8.5.1	Maxwell's Load Paths and the structural volume	162
8.5.2	Layout optimisation	167
8.5.3	Evolutionary topology optimisation	167
8.5.4	Ground structure	170
8.6	Shape optimisation	170
8.6.1	Nodal adjustment	170
8.6.2	Graphic statics and reciprocal force diagrams	171
8.6.3	Form-finding	179
8.7	Size optimisation	180
8.7.1	Optimality criteria	180
<b>9</b>	<b>Optimisation methods</b>	<b>183</b>
9.1	Introduction	183
9.2	The design space	183
9.2.1	Exploring the design space	184
9.2.2	Design space example	184
9.3	Optimisation methods	187
9.3.1	Deterministic methods	187
9.3.2	Stochastic methods	193
9.4	Optimising optimisation	198
9.4.1	Algorithms, heuristics and metaheuristics	200
9.4.2	Exploration vs. exploitation	201
9.4.3	Multi-objective optimisation and the Pareto Front	201
9.4.4	The Stopping Problem	202
9.4.5	Critical optimisation questions	203
9.5	Conclusion	203
<b>10</b>	<b>Artificial Intelligence and Machine Learning</b>	<b>205</b>
10.1	Introduction	205
10.2	What is Artificial Intelligence?	206
10.2.1	General AI	206

---

10.2.2	Narrow AI	207
10.3	AI methods	207
10.3.1	Predicate Calculus and automated reasoning	207
10.3.2	Machine Learning	210
10.4	The problems and limitations of AI	218
10.5	How might structural engineers use AI?	222
10.6	Conclusion	223
<b>11</b>	<b>Engineering the future</b>	<b>224</b>
11.1	Change	224
11.2	Digital fabrication	224
11.3	Mobile computing	225
11.4	Cloud computing	226
11.5	Quantum computing	228
11.5.1	Why might quantum computers be useful?	228
11.5.2	Classical computers	228
11.5.3	Quantum computers	229
11.6	Optimisation for zero-carbon construction	233
11.7	What is the future role of the engineer?	234
	<b>Author's note</b>	<b>235</b>
	<b>Appendix A: Section properties</b>	<b>237</b>
	<b>Appendix B: Strain Energy</b>	<b>239</b>
	Strain Energy Density	239
	<b>Appendix C: Finite Element Analysis (FEA)</b>	<b>240</b>
	Matrices	240
	Example bar matrices	240
	Matrix determinates	241
	Matrix inversion	241
	Inversion example	242
	Finding eigenvectors and eigenvalues	243
	Example eigensolution	243
	<b>Appendix D: Buckling</b>	<b>245</b>
	Euler buckling	245
	Buckling amplification	245
	<b>Appendix E: Dynamics</b>	<b>247</b>
	Vibration of a string	247
	Vibration of a beam	247
	Vibration of a building	247
	Footfall/human-induced vibration	248
	<b>Appendix F: Linear structures</b>	<b>251</b>
	<b>Appendix G: Cable structures</b>	<b>255</b>

<b>Appendix H: Arches and domes</b>	<b>256</b>
Corbelled arch	256
Parabola	256
Catenary	256
Analysing arches	257
<b>Appendix I: Bohn diagrams</b>	<b>258</b>
<b>Appendix J: Braess' Paradox</b>	<b>259</b>
<b>Appendix K: Quantum computing</b>	<b>262</b>
Vector notation	262
Logic gates	263
Entanglement	266
<b>References</b>	<b>267</b>
